

Greatly improved sound quality for a variety of hearing needs

Unfortunately, even with a hearing instrument, chances are that due to background noise you often struggle to hear clearly and participate actively in all that life has to offer.

We can help.

Our affordable and easy-to-use assistive listening devices, shown in this brochure, allow you to focus on what you want to hear, near or far away, effectively removing unwanted background noise and greatly enhancing sound level and clarity.

As a result, you will enjoy better hearing and relaxed conversation anywhere you happen to be – watching TV, conversing with friends and family, at social gatherings, in the car, out shopping, at theater and musical performances, or in the office or classroom settings.

The perfect companion for your hearing instrument

- Greatly reduces unwanted background noise and enhances sound level and clarity.
- Enjoy easy, relaxed conversations – The sound you hear is clearer and annoying interference is minimized.
- With Zoom and Wide settings you can focus on single or multiple sound sources (for one-to-one or group conversations)
- Use it anywhere – In the car, in classroom settings, connect it to your TV, take it to the theater, or to any social gathering.
- Easy, discreet use with a variety of Telecoil-equipped hearing instruments: BTE (Behind the Ear), ITE (In the Ear), ITC (In the Canal) and some Cochlear implants.
- Microphone to Receiver transmission up to 150 feet!
