

# Westone® Earpiece Materials and Colors

## Silicone

### OtoBlast™ Standard

### W-1™ Standard

### OtoBlast™ and W-1™ Glitter

### OtoBlast™ DisappEar™

**Please Note:** Silicone earpieces with DisappEar™ Colors are available in a matte finish only.

**Please Note:** Color samples depict actual earpiece colors as closely as the printing process will allow. Please be aware that some colors are difficult to reproduce. Brightly colored earpieces will be significantly brighter and more vivid than can be shown here.

### OtoBlast™ and W1™, Cat Eye

**Please Note:** All OtoBlast™, Glitter, and Camo earpieces are available in a gloss, matte, and with Slick-Sil™ AM (Anti-Microbial) finishes.

### AquaNot™

**Please Note:** All AquaNot™ and Swyrl™ earpieces are manufactured from 100% American-made floatable silicone and are available in a gloss, matte, and with Slick-Sil™ AM (Anti-Microbial) finishes.

### e-Compound™ Canal Additive

**Canal Additives, Part I**  
**e-Compound™ Additive** - is designed to reduce feedback by diffusing reflected sound between the tip of the earpiece and the eardrum. e-Compound™ is available on all standard acrylic and some silicone earpieces, and can also be ordered in combination with a Flex Canal option. e-Compound™ is available in white and beige with the Flex Canal option.  
**Please Note:** Earpieces with Flex Canal and e-Compound™ canal additives are available in a matte finish only.

## Acrylic

### Standard

### Custom

**Please Note:** All acrylic earpieces are available in gloss and matte finishes.

### DisappEar™

An earpiece made with Westone's unique DisappEar™ additive virtually vanishes when inserted in the ear. Our unique manufacturing process embeds micro fibers in the earpiece material that work just like camouflage in the ear.

### Acrylic Canal Additives

### Glitter

### Neon and Candy

### DisappEar™

### Registered Trademark and Trademark Information

Westone and DefendEar are registered trademarks of Westone Laboratories Inc., AquaNot, OtoBlast, Swyrl, e-Compound, and W1 are trademarks of Westone Laboratories Inc. Slick-Sil is a registered trademark of Surface Solutions Group LLC.

## Vinyl (PVC)

### Formula II Standard

### Formula II Clear Custom

### Westone® Earpiece Finishes

**Acrylic Earpiece Finishes**  
Our acrylic earpieces are available with two finishes.  
**Gloss:** The high gloss finish looks great on more vivid colors such as our AquaNot™, Swyrl™, neon colors, glitter, or Cat Eyes options.  
**Matte:** The smooth matte finish helps hide the earpiece in the ear when using clear or one of Westone's many skin tone or DisappEar™ color choices.

**Silicone Earpiece Finishes**  
Most of our silicone earpieces are available with three different finishes.  
**Gloss:** The gloss finish is a shiny glaze that looks great, especially with vivid colors such as our AquaNot™, Swyrl™, neon colors, glitter, or Cat Eyes options.  
**Matte:** A smooth matte finish helps hide the earpiece in the ear when using a clear earpiece material, or one of Westone's DisappEar™ or skin tone color choices.  
**Slick-Sil™ AM (Anti-Microbial):** Slick-Sil™ AM is a chemically bonded coating for silicone earpieces that is proven to be 99.9% effective against bacteria, germs, and other pathogens. As a result, Slick-Sil™ AM can be part of an aggressive infection control protocol. Slick-Sil™ AM produces a beautiful velvet finish that not only looks great but also helps with the insertion of silicone earpieces by providing a low friction surface finish. Available in a matte finish only. Not available with DisappEar™ skin tone additive.

**Vinyl (PVC) Earpiece Finishes**  
Our vinyl earpieces are available in only one finish.  
**Matte:** The smooth matte finish provides a smooth velvet finish on clear, skin tone, and tinted earpieces.
